

For patients with
earlier-stage cancer,

I am on a
MISSION
to
CURE

Though your goal is to treat with a curative intent, you recognize that a cure is not possible for every patient.¹ That is why it's important to partner with your multidisciplinary team (MDT) to develop treatment plans, including consideration of systemic therapies, for appropriate patients with earlier-stage cancers.

Collaborate with your MDT
to explore treatment options,
including systemic therapies,
to help achieve your goals.
